WMBUSSW

BMETERS Hydrolink Software

Technical Specification

The Hydrolink software allows the configuration and extremely simple managing of the consumption data radio collecting system including;
- Encryption enabling
- Alarms enabling
- Data transmission intervals setup (every 30 seconds by default)
- Data transferring days setup
- Serial number and end user data association
- Consumption history
- Survey list (Example: end users from the same street or building where to go and perform scheduled readings)
- Possibility to detect a specific module, all of them or only the ones listed in a survey list
- Data export in CSV or XML format
