

## How To: Tighten Toilet Seat (thick) *(shown on WDLU1000RT)*

1. Lift up toilet seat and lid so that it is vertical against pan, and pull upwards – note: it might require some extra force, depending on how loose the seat has become.

2. The spindles that the seats sit on will be visible – remove the chrome covers and locate the screws. Tighten these with a Philips head screwdriver and reassemble.

The seats will make a soft click when fitted.

*Note: when fitting the seat back onto the pan, make sure the seat is put back the same way it was removed, and that the spindles on the pan are lined up with the holes at the back of the seat.*
