TAPWARE

WITH TRIM KITS &
UNIVERSAL SHOWER VALVES

FEATURES

Elevated Design Meets Practical Innovation

The Pioneer bathroom tapware range brings together functionality, timeless design, and future-ready features. Built for modern living and engineered for long-term performance, Pioneer is the go-to choice for those who demand more from their bathroom fixtures - more flexibility, more style options, and more confidence in compliance with evolving standards.

Future-Proof Flexibility with Trim Kits

Our Pioneer bathroom tapware range now features modular trim kits – the ultimate in design flexibility and installation convenience. With separate rough-in and finish components, plumbers can complete the behind-the-wall installation early, leaving homeowners and designers free to choose their perfect finish and style later. Whether you're building new or renovating, this approach reduces delays, supports design changes on the fly, and makes future upgrades a breeze.

Lead-Free Peace of Mind

Crafted from premium 304 stainless steel, Pioneer tapware is 100% lead-free, delivering healthier water from the start. This not only reflects our commitment to quality and safety but also ensures compliance with New Zealand's upcoming low-lead plumbing legislation, effective from May 2026. When you choose Pioneer, you're choosing a solution that's built to last and ready for the future.

Six Designer Finishes, Endless Style

From timeless chrome to bold matte black, Pioneer is available in six on-trend finishes to suit any bathroom aesthetic: brushed gold, brushed nickel, matte black, gun metal, chrome, and the stunning new brushed bronze. Whether you're going minimalist or making a statement, this versatile collection ensures your tapware doesn't just function beautifully — it looks the part too.

ISOLATION VALVE

Designed to complement the Pioneer and Civic tapware ranges, this compact isolation valve brings the same attention to detail to a component that is often overlooked. Its streamlined cylindrical body, slim lever and matching circular escutcheon create a clean, coordinated finish that sits naturally alongside the surrounding tapware and bathroom fittings.

The wall-mounted design provides convenient local water isolation, making future servicing or maintenance easier without needing to shut off the wider water supply. Clear hot or cold identification helps installers and users quickly distinguish each connection, while the compact profile keeps the installation neat and unobtrusive. Available in coordinating Pioneer and Civic finishes, it provides a practical finishing touch for bathrooms, kitchens, laundries and other spaces where reliable water isolation and consistent design are equally important.

NANO-COATING

Anti-fingerprint nano-coating improves both hygiene and appearance in kitchens and other hygiene-critical areas. It provides long-lasting protection for stainless steel, with key benefits including durability, self-cleaning and anti-fingerprint performance.

The antimicrobial coating helps prevent bacterial growth and biofilm formation, while remaining resistant to harsh disinfectants. Surfaces stay cleaner and require less effort to maintain, with water alone often sufficient for hard-to-reach areas.

Corrosion Protection

While stainless steel is highly durable, it is not resistant to everything. Nano-coating adds a hard protective layer that improves resistance to acids, bases, weathering and other aggressive substances.

How Surface Sealing Works

A silicon oxide coating is applied to the surface and cured with UV light, creating an invisible micro-rough structure that prevents dirt, grease and water droplets from bonding to the surface.

This is particularly effective in commercial kitchens, where greasy residues can often be removed with water rather than harsh detergents, reducing cleaning effort and the use of chemicals.

Stainless steel bathroom tapware provides a sleek, modern look while delivering durability and safety. Unlike tapware ranges that contain brass, which are classified as low-lead, stainless steel is 100% lead-free. This ensures safer water quality by completely eliminating the risk of lead leaching.

Resistant to rust and corrosion, it thrives in humid conditions, offering longevity comparable to low-lead tapware. Its non-porous surface repels bacteria and stains, enhancing hygiene, while its easy maintenance and recyclability make it an eco-conscious choice.

With a versatile, timeless finish, stainless steel tapware blends style and health-focused benefits seamlessly.

Choosing Waterware tapware means your choosing lead free.

304 Stainless steel. Comes in six different finishes:- brushed gold, chrome, brushed bronze, matte black, gun metal, brushed stainless.

UNIVERSAL VALVES

Why: A single valve body can pair with both Pioneer or Civic trim kits and finishes without replacing the valve itself.

Future-proofing: If you want to change your shower style or finish later, you can just swap the trim rather than opening the wall to replace the valve.

Simplifies installation: Plumbers and builders can stock and install one valve type for multiple bathroom styles, saving time and reducing complexity.
