

5377 SERIES CALEFFI eCAL®

RECOMMENDED WATER PROPERTIES

- **Hardness:** <45°f (25 °dH)
- **pH:** 6,5 - 8,5
- **Iron:** < 0.5 mg/l
- **Conductivity:** < 1500µS/cm

ADVANTAGES

WHAT IS CALEFFI eCAL?

The new anti-scale device with filter and magnet utilises electrolytic action to reduce limescale formation. It protects systems, generators, domestic appliances and taps, without altering water quality.

MATERIALS

- DR low lead brass CC768S housing
- **Plastic cover:** PA6G30
- **Transparent Cartridge:** PA12
- **Internal elements:** Alloy Cu - Zn/Ti
- **Filter:** Stainless steel

NO CHEMICAL SUBSTANCES

Prevents limescale formation through electrolytic action only

DOES NOT REQUIRE ELECTRICITY

Reduces consumption, maximises savings

RESIDENTIAL APPLICATION

Installation on the domestic cold water pipe

Fully
inspectable

UP TO 85%

Reduction in limescale
deposits in the water

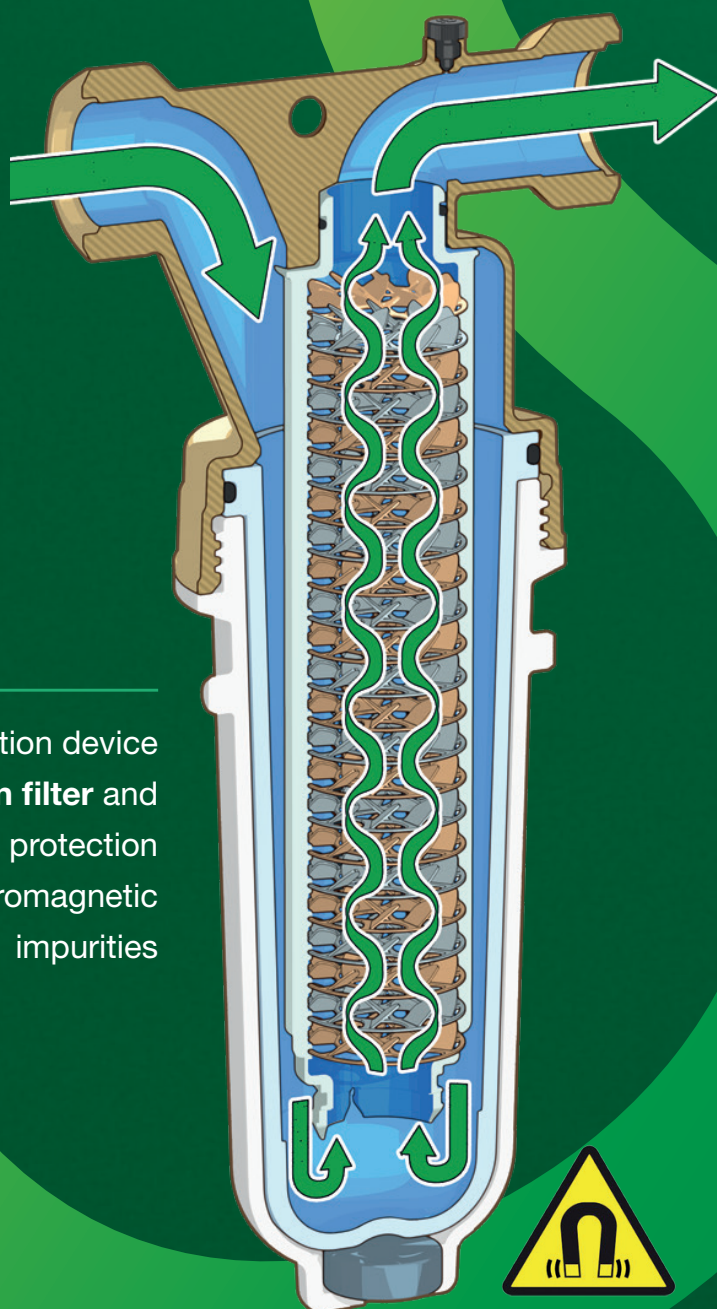

UP TO 7 YEARS

Continuous
operation guaranteed

ELECTROLYTIC EFFECT PREVENTS LIMESCALE FORMATION

CALEFFI eCAL utilises electrolytic action to change the structure of the calcium crystals that cause limescale. This prevents harmful deposits while ensuring the water hardness and the chemical composition of the water remain the same.

Multi-function device with **built-in filter** and **magnet** offering protection even from ferromagnetic impurities

WHY TACKLE LIMESCALE

- It encrusts electric resistors and heat exchangers
- It limits the flow inside pipes
- It increases energy consumption
- It damages domestic appliances and taps
